

One Key Fits All

By Butch and Fonda Williams

One of the most attractive feature of highway style buses for conversions, are the big storage bays.

While making plans and working on layouts, I was also busy collecting parts and supplies needed for our MC9 coach conversion. I was trying to pick up items, that I knew I would need or want in the future, when I found a good deal on them (rather than when I actually needed them).

Things like the inverter, Webasto, breaker panels, power cords, drainage fittings, etc., could sometimes be had at impressive savings if you buy them at the right time. Usually it is NOT the time

when you need them.

Unfortunately, it is bought at full price because it was needed to finish a project or it is holding up the next step.

However, on occasion, a good deal will show up ahead of time and I have accumulated quite a large number of items. It only made logistical sense to store all this stuff in the coach bays until it was needed. That's what coach bays are for, right?

Although we live in a very small town and the coach is parked right outside our living room window, it occurred to me that there was an awful lot of valuable stuff in unsecured storage. To keep things

Have you upgraded your bus?

We are looking for Bus Nuts who have made modifications to their coaches. If that is you, please send us an article, long or short (with photos), about your upgrade.

Send your articles to:

Gary@BusConversions.com

You will receive a FREE one year subscription or extension for each article we run.
