

Beau the Skoolie

A 2000 Thomas Freightliner

By Brooke Miller

Howdy, Y'all! I'm Brooke. My husband is Kyle and we have two amazing little girls who make our world go round, they're five and two. We homeschool them and they have wanted adventure as much as we have for their entire little lives! We're from eastern Kentucky. We've only been to a few states in our lives.

We have always loved all things that have to do with a nomadic lifestyle but as society told us to do, we bought a home, did the career, had the nice expensive cars, and lived only for belongings and for one-half of a decent vacation per year. The typical "American Dream" if you will.

This didn't feel right to us and we slowly started to realize we wanted more out of life than just to float along daily doing the same things in the same town. So, we listed our house in December 2021 (conveniently when the market was up) and it took off from there!

The day our house listing went live on the market we had so many viewings and offers that we took the highest one and called it a day. Once we closed on our home in January, we started to look into what we would do for the time being while building our tiny homestead on the property.

I have family land that we originally planned to build a tiny homestead on after selling our

house in the suburbs. This plan seemed the most reasonable in the realm of things that were possible at the time for us.

EHP

Engine Heat Protection

Reduce that unwanted heat with EHP Wet Blanket exhaust insulation

EHP Wet Blanket is a 1/4-inch thick ceramic-based material used for insulating underhood components from heat. Usable in temperatures up to 3200 degrees Fahrenheit, the blanket is wrapped around the heat source, such as exhaust pipe and reduces its radiating temperature by half. It contains no asbestos. Easy to install - complete instructions.

3625 Lynx Meadow Drive Prescott, AZ 86303
